

Network Visibility for All

Kentik | Protect the Network, Protect the Apps

>> To really ensure user experience...

Need network, system, and application visibility, all integrated.
But network, APM, logs, and metrics, have all been siloed systems.
Kentik takes network traffic data; solves network nerd problems.
Like peering, planning, DDoS, performance, and security analytics.
W/ backend storing all the data, with no aggregates or roll-ups.

- >> But what about the rest of the compnany?
- ➢ Grafana is everywhere ☺
- >> So we had Grafana Labs develop the Kentik Connect app.

Kentik Network Traffic Analytics Is Broken

- >> Why > than metrics for network?
- "Is it the Network?" is WAY too common
- ≫ "How can we not know?"
- But Network data is big data
 Kill "Aggregate and Discard"
 And kill Siloes
- >>> But DIY is a large effort

Kentik Kentik Detect: Platform for Data-Driven NetOps

Kentik Kentik / Grafana Integration

- Root cause involves systems, network, & apps.
- Grafana integration fills traffic and netperf gap for correlating and exposing on metrics dashboard.
- >> Providing all three critical views.
- For many kinds of groups and users.

Kentik This Approach is in Use and Working!

Architecture 🍌

Kentik Kentik By The Numbers

Kentik Kentik Detect Enables

- >> Instant, escalation-free troubleshooting
- >> Peering and transit analytics
- Sales prospecting & customer success
- DDoS detection and mitigation
- Capacity planning **》**
- Cross-team access and collaboration
- Portal integration
- >> Infrastructure & customer security
- >>> Customer cost analytics

« kentik | Who is Kentik?

- 3 year old company, HQ in San Francisco
- SaaS network traffic visibility provider
- Founders from Akamai, Netflix, YouTube, CloudFlare

The Need	Fast, unlimited drill-down, full retention back-end						
Kentik Data Engine	Column-store, distributed system supporting SQL, REST, multi-tenancy, and extensible schema. Bare- metal, containerized, micro-services architecture						
Modeled After	Akamai Query and Google Dremel						
Comparatives	10x to 100x speed and 10x+ advantage over Hadoop, Impala, Drill, Spark, Cassandra, and Red Hat

Kentik Unconstrained Ad-Hoc Traffic Analysis

- 90 days (or more) of instantly accessible raw flows
- >> No aggregation, no rollups, no data cube fragility
- Instant data cubes
- Ad-hoc, raw data query: 95%ile response < 2 seconds
- ➢ Benefits:
 - Service assurance
 - Operational excellence
 - Shift to Innovation

>>> Flexible, network-wide detection

- Alerts operate on order of seconds, not five minute data segments
- >> Exploratory analytics to hunt for threats and intrusions
- >> Rapidly adjust alerts with new insights
- Automated mitigation options
- ≫ Benefits:
 - Minimal false positives & negatives
 - Keep up with changing threats

«kentik Intuitive BGP Peering Analytics

- New state of the art for peering analytics
- >> Interactive BGP path visualizations
- Instantaneous filtering and drill-down - no waiting!
- - Reduce costs
 - Increase performance and resilience
 - Find new business opportunities

Kentik Intuitive BGP Peering Analytics

- >> New state of the art for peering analytics
- Interactive BGP path visualizations
- Instantaneous filtering and drill-down - no waiting!
- - Reduce costs
 - Increase performance and resilience
 - Find new business opportunities

- >>> Long-term storage of detailed records
- >> Agile, fast DDoS detection & mitigation
- >> Extensible flow data model including security semantics
- >> Ease of integration with Splunk and SIEMs
- Multi-tenant access to protect one analyst or query from swamping the system

Kentik Build and Share Dashboards for Multiple Teams

- Any analysis can be saved to a dashboard
- Build any number of audience-specific dashboards
- Email PDF reports from any dashboard to configurable subscription list

Kentik Build and Share Dashboards for Multiple Teams

- Any analysis can be saved to a dashboard
- Build any number of audience-specific dashboards
- Email PDF reports from any dashboard to configurable subscription list

Kentik Sales Prospecting: Transit ASNs View

Find transit networks that are potential customers

Find transit networks that are potential customers

Kentik Application Versus Network Performance

Application Analyze Network Performance Issues Non-Network **Root Cause** ... Availability Performance Paths Congestion

Network Root Cause

- Problem: "Our customers know about issues before we do!"
- Solution: Find & mitigate issues faster!
- Flexible alerting for many use cases:
 - Security, ops, availability, performance
- Network-wide scope with raw data granularity
- >>> Very low latency

«kentik API and Portal Integration

- >> Highly performant APIs>> REST & SQL
- >> Sample integrations:
 - Grafana.net
 - Auvik.com
 - ServerCentral
 - GeoFlow (Tor)

Kentik Digital Supply Chain Assurance

>>> Identify critical 'digital trading partners' in your supply chain

- E.g. Key API partners and external users
- >> Monitor and analyze in real-time
- >>> Ensure performance and availability
- >> Establish and manage advantageous peerings

- >> Add traffic tags for each service, user, sub-network
- Leverage routing information to support "packet mile" cost analysis
- >> Analyze patterns for upstream and downstream traffic
- >> Analyze individual or groups of links by customer or application
- Variable granularity from high-level aggregation to individual flows

Thank You!
