## Who is Proofpoint

#### **Advanced Threat Protection**

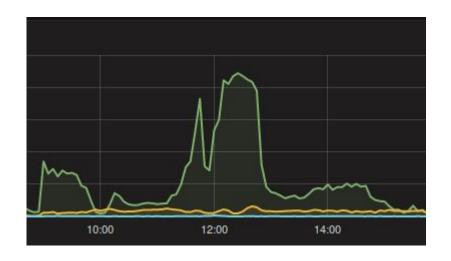

- Email
- Social media
- Network
- ...

Big names use Proofpoint to protect their data

## Who is Brian Hawkins

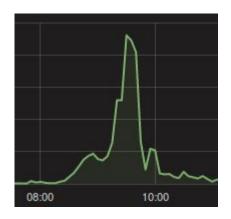

- Staff Engineer at Proofpoint
  - o Big Data
  - Cassandra
  - Kafka
  - Storm
- Co created KairosDB (with Jeff Sabin)
- A guy who now stares at graphs a lot

## What is it?

## What is it?

### What is KairosDB

- Inspired by the features of OpenTSDB
- Uses Cassandra as the backend
- Needed to consume both system and application metrics for Proofpoint
- Consumes ~20 billion data points a month
- System scales really well

## KairosDB Features

- 20+ Aggregators
- Easy to create plugins
- Flexible storage types (int, float, string, custom)
- Integrations with CollectD, Solr, Graphite, Grafana, ...
- Easy to setup and administer
- Fast to ingest data

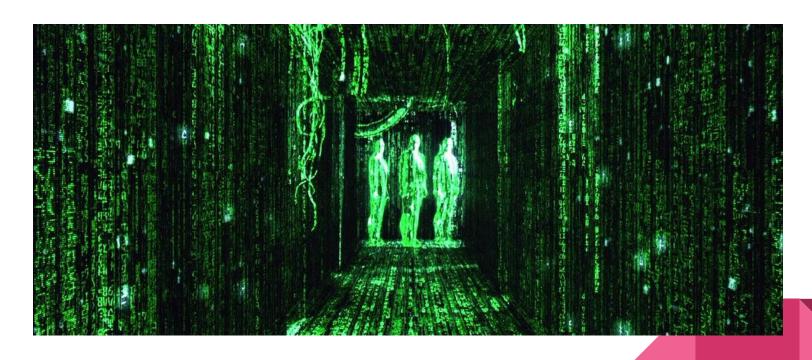

"Write once, read never" - author of TSCacheD

#### Store a lot of metrics

Just be careful how often you store them

# Metrics Are Everywhere

#### Super Store X
